

DELARO™

ACHIEVE YOUR PERSONAL BEST YIELD WITH DELARO™

With each new season comes the opportunity to do better—to achieve your personal best. And that's what NEW Delaro fungicide can help you do.

Its advanced formulation delivers:

**UNBEATABLE,
BROAD-SPECTRUM DISEASE
CONTROL**

Delaro is formulated with two heavy-hitting modes of action, together maximizing control of even the toughest diseases, such as gray leaf spot, northern corn leaf blight and frog-eye leaf spot.

**BEST-IN-CLASS
DUAL MODE OF ACTION
RESIDUAL**

Unlike other corn and soybean fungicides, Delaro delivers long-lasting residual control from both its strobilurin and unmatched triazole components for extended performance.

**IMPROVED
PLANT HEALTH**

Delaro promotes healthy, dark green leaves for improved photosynthesis and increases plant stress resistance to utilize the full genetic potential and yield of your seed.

YOUR BEST CORN

- **Unbeatable** preventative and curative defense against yield-robbing diseases, including gray leaf spot, northern corn leaf blight, anthracnose leaf blight and southern rust.
- Improved **harvestability** thanks to strong, healthy stalks that promote nutrient flow throughout the grain fill period and with fewer downed plants.
- Application flexibility at-tassel timing (VT to R2), in combination with a herbicide (V4 to V7) and/or in between (V8 to VT). Delaro can be applied by air, by ground or by chemigation and can be mixed with adjuvants, herbicides, insecticides, and micronutrients.

YOUR BEST SOYBEANS

- Unbeatable preventative and curative defense against yield-robbing diseases, including frogeye leafspot, brown spot and aerial blight.
- Suppress **white mold** in a way Trivapro®, Priaxor® and Headline® can't.
- Fight disease resistance. Delaro's versatile and powerful triazole fights strobilurin-resistant diseases such as frogeye leaf spot and aerial blight; plus, Delaro's dual modes of action ensure you're not promoting further disease resistance development.

ADVANCED FORMULATION UNIQUE MOVEMENT

TRIAZOLE + STROBILURIN

Delaro is powered by two heavy-hitting components, giving you two modes of action that together deliver superior, long-lasting results.

Delaro diffuses in and on the waxy surface of the plant.

This optimized combination means your fungicide has more activity for preventative and curative defense against key diseases, long-lasting control and reduced risk of developing fungicide resistance.

Delaro expands protection to new plant growth with movement in surface moisture, such as dew.

The progressive movement of Delaro maximizes and extends its protection of your crop in a way other fungicides can't.

Within the plant, Delaro is transported systemically throughout plant tissue for enhanced coverage.
