

# Previcur® Flex Fungicide

## FRAC Group 28 Fungicide

### /// INTRODUCTION TO PREVICUR® FLEX FUNGICIDE

Previcur® Flex fungicide protects your vegetables and potatoes against Downy mildew, Late blight, Pythium root rots and seedling diseases. Previcur Flex is a systemic fungicide that moves throughout the plant for long-lasting protection of existing foliage and new growth.

### /// BENEFITS

- **Tankmix Partner**  
Previcur Flex can be used with a variety of tankmix partners to control Downy mildew, Late blight and Pythium.
- **Resistance Management**  
Previcur Flex belongs to FRAC Group 28, a group with low to medium risk of resistance.
- **Rainfast**  
Quick penetration makes the fungicide rainfast 30 minutes after application.

### /// FLEXIBILITY WITH PREVICUR FLEX

- Previcur Flex can be successfully integrated into a program with other modes of action and offers flexibility with regard to application methods and timing.
- Previcur Flex has recently received MRLs for the fruiting and leafy vegetable crop groups making it a more versatile tool for farmers.

### /// MODE OF ACTION

Previcur Flex attacks fungi at multiple growth stages:

- Stops spore development on leaf and stem surfaces.
- Halts disease spread in the field.

### /// PREVICUR FLEX DELIVERS

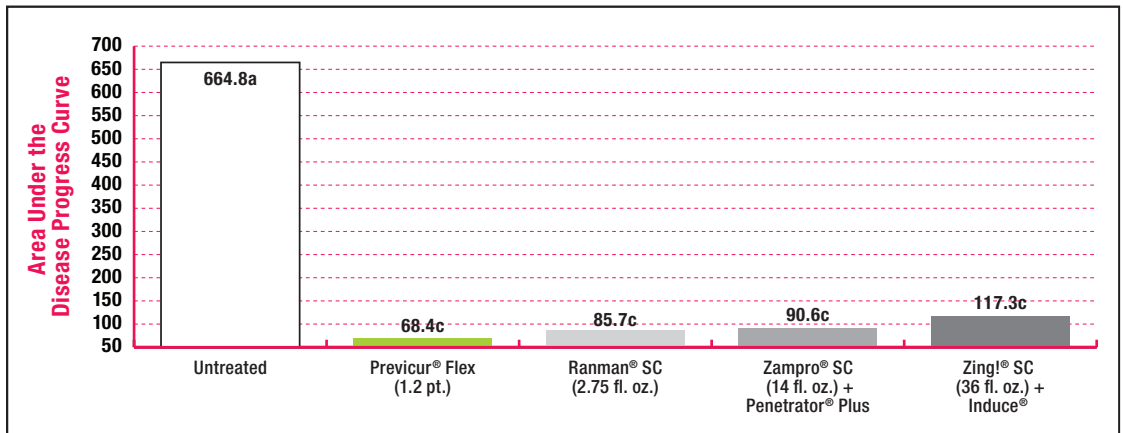

- Penetration of plant tissues with systemic movement.
- Action on the mycelium of the pathogen where protectants cannot reach.
- Antisporulation on leaf and stem surfaces.
- Preventive activity that forms a protective layer.

### /// PREVICUR FLEX QUICK FACTS

- **Active Ingredient:** Propamocarb hydrochloride
- **Signal Word:** Caution
- **REI:** 12 hours
- **PHI:** 2–14 days, depending on crop
- **Use Rate:** Varies by crop, disease and if tank-mixed or not
