MAXIMIZE YIELD AND QUALITY WITH MIDSEASON AND LATE-SEASON SOLUTIONS

Cotton plants are poised to produce bolls from the day the seeds are planted to the day you harvest. Using plant growth regulators and harvest aids will set you up for a successful crop.

In midseason, plant growth regulators can be used to channel the plant's energy into producing lint. With easy application rates, Stance® plant growth regulator guides your crop toward maximum yield.

For late season, utilizing Bayer harvest aids Ginstar® and/or Finish® 6 Pro sets the stage for a clean and efficient harvest with high-quality fiber and high yield.

Bayer knows the path you're on and the science you need to paint each field pure white at harvest. Lean on our science to paint your masterpiece.

PLANT GROWTH REGULATOR

Managing vegetative growth is key for cotton growers. Plant growth regulators help you maximize production in your cotton fields. Stance features unsurpassed convenience and simplicity. It fits any management program, whether conditions call for a single shot or multiple applications where season-long management is required. Proper management can also reduce "bridging" on the header of stripper-harvest cotton, allowing for a faster harvest.

STANCE® ADVANTAGES:

- **Dual modes of action.** Stance affects two key plant hormones to provide effective and consistent vegetative management.
- **Easy application rates.**
 - 2 fl oz/A as needed to control growth for moderate vegetative vigor
 - 3 fl oz/A to 4 fl oz/A as needed to control growth for high vegetative vigor
- **Earliness.** Growers who make the first application of Stance at pinhead to match-head square control plant height, put the plant into reproductive mode sooner and set the season up for an early finish.

Finish 6^{PRO}

Harvest Aids

After season-long crop management, harvest aids ready the crop for a clean, efficient harvest with minimal regrowth.

GINSTAR® ADVANTAGES:

- **Superior regrowth control.** Regrowth is controlled regardless of the conditions – including the cooler temperatures of the Texas High Plains region, the arid conditions of the West and in tough regrowth conditions in the Delta and the Southeast.
- **Cleaner cotton.** Removes mature leaves, drops juvenile growth and sheds immature squares, reduces trash and staining, and preserves lint quality.
- **Tankmix options.** Use alone or tankmix with Finish 6 Pro harvest aid to open bolls faster as well as drop leaves.

FINISH® 6 PRO ADVANTAGES:

- **Open bolls fast.** Opens bolls fast without the harsh side effect of desiccants and PPO-type defoliant.
- **Preserve quality.** Faster opening reduces the amount of time lint is vulnerable to damage from wind and weather, preserving fiber quality and protecting profits.
- **Reduce risk.** Faster, more gentle opening reduces the risk of leaf grade and color discounts. Finish 6 Pro cotton defoliant is designed to deliver a clean, consistent drop of foliage with no leaf stick, leading to higher-value cotton and improved profit potential.
