CORVUS®

Early Season Win over Weeds. End of Season Rewards.

Powered by excellent control of emerged weeds and reactivation, Corvus® herbicide delivers an early season win against weeds.

/// BENEFITS

• Proven Performance

With over 10 years of proven performance, Corvus delivers outstanding control of emerged weeds.

• Resistance Management

Multiple sites of action provide strong control of troublesome grass and broadleaf weeds, and discourage the development of weed resistance.

• Reactivation

Unique chemistry triggers reactivation with as little as a half inch of rain, ensuring consistent weed control even under adverse environmental conditions.

/// FACTS

- Corvus delivers rapid burndown to take out early weeds, long-lasting residual to prevent new weeds and reactivation with rain to get late weeds.
- With its two modes of action, Corvus controls more than 65 grass and broadleaf weeds.
- Just a half inch or more of rain reactivates Corvus and boosts its weed control properties.
- Because of its low use rate, Corvus can be applied in ounces vs. pints or quarts per acre required by other herbicides.
- Corvus is labeled to control more than 65 grass and broadleaf weeds, including foxtail, common ragweed, waterhemp and other weeds exhibiting resistance to glyphosate, PPO, triazine and ALS herbicides.
