ELIGIBLE

Dicamba That's Tough on Weeds, Easy on Corn

DiFlexx® herbicide is an outstanding combination of dicamba and a highly effective CSI™ Safener.

/// BENEFITS

- **Effective Weed Control**
Offers extremely fast and highly effective control of tough to control broadleaf weeds.
- **Wide Application Window**
DiFlexx can be applied in corn from pre-emergence to postemergence through the V10 stage of growth (10 leaf collar) or 36" tall, whichever occurs first.
- For all applications of this product, we strongly recommend the inclusion of a VaporGrip® Xtra Agent product in the tank mix.
- **Crop Safety**
CSI Safener enables corn plants to withstand herbicidal activity, which can lead to increased root growth and plant health.

/// FACTS

- DiFlexx herbicide can be applied up to 14 days before, during or after planting of corn crop.
- DiFlexx provides outstanding control of emerged labeled weeds and provides up to 14 days of soil activity benefit on certain small-seeded broadleaf weeds.

- DiFlexx includes a highly active CSI Safener technology that has soil and foliar uptake, and is active in both pre- and post-applications. DiFlexx can be used on any soil for greater crop compatibility and can be applied from burndown to V10 stage of corn growth.
