

VELUM[®]
ONE

VELUM[®] ONE NEMATICIDE

INTRODUCTION

Velum[®] One is a new nematicide for tomato and pepper growers to apply early in the growing season via drip chemigation to help provide higher yields through suppression of nematodes and disease. Velum One has been shown to be effective against a wide range of nematodes. Additionally, it will suppress the incidence and severity of Powdery mildew. Velum One is not intended as a replacement for fumigants, and it will be most effective when used as part of a complete nematode management program. This early-season activity has been shown to protect root health and to help establish the crop. These benefits will provide growers with the confidence that they are helping obtain the best return on their investment and helping maximize yield with Velum One.

BENEFITS

- Increased yields
- Wide-spectrum nematicidal activity
- Suppression of key diseases such as Powdery mildew
- Ease of application – drip chemigation

A New Mode of Action Against Nematodes

Untreated
Live Nematodes

Treated with Velum[®] One¹
Dead Nematodes

¹Treatment with active ingredient in Velum[®] One.

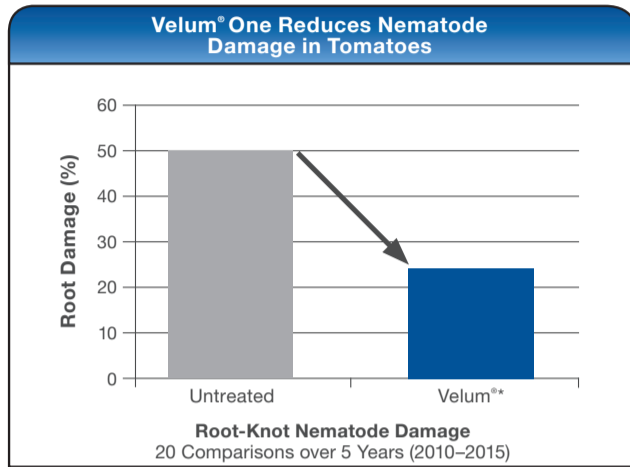

PRODUCT INFORMATION

Active Ingredient	Fluopyram
Use Amount	6.84 oz./A
Application Method	Chemigation (drip)
Application Timing	Early season to protect young roots from nematode damage
Chemigation Guidance	<ul style="list-style-type: none"> • As a chemigation-applied product, Velum[®] One follows the irrigation wetting front; therefore, thorough wetting of the root zone is critical to attain best performance • Stages of chemigation: <ul style="list-style-type: none"> – Pre-wet – at least 30 minutes, up to 40% of set – Injection – meter for at least one hour; longer injection will improve uniformity; inject as soon after pre-wet as possible – Flush – completely flush the chemigation lines • Longer irrigation sets can improve the distribution of the product to increase the number of roots protected
