The power of two active ingredients for early season protection from insect pests in sugarbeets.

**Features of Poncho® Beta Seed-Applied Insecticide**

- Contains TWO active ingredients, clothianidin and beta-cyfluthrin for extended soil and foliar insect protection
- Broad spectrum protection from injury caused by leafhopper, root maggot, flea beetle, wireworm, black cutworm, springtail, black bean aphid, and leaf miner
- Reduction of beet curly top virus by preventing transmission by the beet leafhopper
- Rapid initial and long lasting efficacy for maximum stand counts and increased recoverable sugar
- Available on sugarbeet seed with a minimum build-up coating of 30%

**Product Specifications**

- Recommended use with a broad-spectrum fungicide package for protection against seed and seedling diseases (42-S Thiram and Allegiance® FL from Bayer CropScience).
- Rate of 5.07 fl oz per seed unit. One gallon treats 25.25 seed units.
- Poncho Beta contains 400g of clothianidin and 53.3g of beta-cyfluthrin per liter of formulation.
- Application results in 60g of clothianidin and 8g of beta-cyfluthrin per seed unit.

Poncho Beta is not registered for use and is currently under review by the EPA.
